

What was good

You have:

- Created / edited a Scratch game
- Shown that you can use different methods to control a game character
- Found problems in code and fixed them
- Used if statements and loops in your code
- Independently developed your own ideas

Improvements

You could have:

- Explained your finished program more clearly
- Used different methods to control characters
- Used more advanced techniques (if, repeat) to create more interesting projects
- Identified / solved problems accurately

Next Steps

- Say which programming activities you liked the most / least
- Explain why using IF statements is so important in computer programs
- Consider how the programming skills you have been learning could be used outside the classroom in the future
