

What was good

You have:

- Successfully edited / created HTML code to change both the content and the layout
- Used HTML tags with parameters to add hyperlinks and images to a web page
- Added advanced features such as rollover buttons and animations to a web page

Improvements

You could have:

- Used a wider range of HTML tags to change the format of your web page(s)
- Used HTML tags with parameters to add hyperlinks and images
- Created more effective web pages with formatting that is suitable for audience

Next Steps

- Write down and explain the function of 4 different HTML tags
- Give reasons why it might be easier to use a template for a large, multi-page website
- Discuss the benefits and drawbacks to use hex codes for colours instead of names
